

CES Show News - Kryptos iPhone Security App Offered Free As CES Show Special

In CES Show news, the Kryptos iPhone voice encryption security app is on display at the CES Show, and they are offering free app downloads until January 10th.

Las Vegas, NV (prHWY.com) January 6, 2011 - A new iPhone security app has been released to provide wiretap proof cell phone calls and help stop eavesdropping, cell phone spys.

Visit <http://www.KryptosCom.com> for more information, screen shoots, specs and links to the iTunes app store secure purchase area.

As part of their CES show promotion, Kryptos Communications is giving away Free downloads of their iPhone Security App until January 10th. The App can stop cell phone spying by encrypting your voice communications.

Kryptos will be at the CES Show in Las Vegas, January 6th-9th, 2011. During the CES show all Kryptos downloads will be free (30 days of service is included).

The Kryptos CES Show Booth Number 1035D is in the North Hall in the "New Product Marketplace" section. It is right next to the CES Show Exhibitor Service Center.

The Kryptos personal and business app uses AES military grade voice communications encryption to enable users to talk freely without fears that their conversation can be heard or recorded by any eavesdropping, wiretapping cell phone spys.

Kryptos is a secure, fully encrypted voice communications application. Kryptos utilizes military grade 256 bit AES encryption to encrypt voice communications before transmission using 2048 bit RSA for key exchange. Kryptos provides VoIP connectivity for secure calls over 3G, 4G and WiFi. Users will download and install the client software and must then activate their account with Kryptos.

Free International Calling - As an additional bonus this app also enables users to make free International calls because the service is VOIP based.

This new mobile phone app features:

- > Fast Secure Download From The Apple iTunes App Store
- > Easy Installation
- > Personal Individual ID
- > Easy to manage technology
- > Secure Peer-to-peer Calling
- > 256 bit AES military grade encryption
- > Secure Calls Over 3G, 4G and WiFi Networks
- > An easily affordable, low monthly service fee

As the access to cellular phones and mobile devices has evolved so has the propensity for security threats in regards to interception of calls made and received. Most people are not aware of how simple it is for hackers to use readily available tools, devices, etc., to intercept standard cellular calls. This new iPhone security app provides an easy, affordable solution.
