
SwiftTech Solutions Offers HIPAA Risk Security Analysis Program for Medical Offices

Third party scans will prepare private practices for upcoming OCR audits

Irvine, CA (prHWY.com) October 6, 2014 - **SwiftTech Solutions**, a HIPAA Compliance IT Services Provider, introduces their Risk Security Analysis Program for medical practices. This program will help these organizations satisfy the HIPAA/HITECH requirement to enlist a third party service provider for their mock audits. A certified IT engineer will visit the organization's office and search for any areas of vulnerability in storage and transmission of confidential health information. Upon completion, SwiftTech Solutions will provide a certificate showing the Office of Civil Rights (OCR) that they've documented their security policies and procedures.

Jared Festner, HIPAA Compliance Specialist at **SwiftTech Solutions**, mentions, "Our Risk Security Analysis Program will help medical practices become compliant with HIPAA and HITECH before the OCR arrives for another round of audits. As a result, they can save thousands or even millions of dollars in fines and penalties."

The Risk Security Analysis Program will search for such HIPAA compliance failures as:

- * Not performing regular security audits and trainings
- * Improper disposal of patient records
- * Unprotected storage of private health information
- * Not creating access controls levels for patient records
- * Not updating data security policies and procedures

For more information about the Risk Security Analysis Program, please visit swifttechsolutions.com, call toll free at 1-877-794-3811 or send an email to jared@swifttechsolutions.com.
